To Whom It May Concern:

This letter is written as a testimony to the outstanding service provided by Jarrett Construction Company for Aurora Flight Sciences.

Jarrett Construction is one of the best construction companies I have ever dealt with through my career which has included several major construction projects.

Jarrett Construction was contracted in October 2003 to build Aurora's state of the art facility for aerospace composite structures manufacturing. The facility was completed and dedicated in June 2004. Today it is used to produce the Global Hawk unmanned reconnaissance vehicle for the US Air Force and Northrop Grumman Corporation.

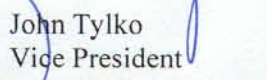

Jarrett Construction provided the following construction services: managing all phases of the construction; coordinating all activities between subcontracts and suppliers; preparing all contracts for signature; establishing and monitoring the construction schedule; establishing and tracking the budget; and using a formal change order system to track costs. Jarrett Construction also worked with the City of Bridgeport to get plans approved, coordinate all inspections and coordinate a code review prior to completion.

The employees of Jarrett Construction were able to provide many other value added services. Jarrett Construction took partially completed plans and turned them into working drawings suitable for bidding and for construction. They prepared subcontractor specifications, solicited bids and selected successful bidders for our approval. Jarrett also prepared contracts for all subcontractors and suppliers for our signature. They were able to maintain an ambitious construction schedule and manage the performance of all subcontractors to achieve that schedule.

We especially appreciated Jarrett Construction's focus on value engineering. They reduced the initial estimated cost of construction by \$425,000. They also worked with contractors to reduce the cost of the air condition system from \$1,500,000 to \$750,000 by utilizing commercial roof top units and adapting them to our specific requirements. They also recommended and sourced butt glazed windows for our impressive conference room. Jarrett Construction also redesigned our office area and produced further savings.

Based on our experience, I would highly recommend Jarrett Construction Company because of their outstanding performance building our new production facility. Selecting Jarrett Construction was one of my best decisions. It led to a very successful construction project and a new manufacturing facility that Aurora Flight Sciences is truly happy with.

Sincerely,

John Tylko
Vice President
Aurora Flight Sciences
